MOBILE EMAIL MANAGEMENT FOR
CRIMINAL JUSTICE SECURE EMAIL USERS

Why worry about mobile email security?

Email is by far the most used mobile business application and your colleagues are sending, receiving and holding more data than ever on their mobile devices. Much of it could be privileged information and, once on a mobile device it is outside your network and control.

Small and portable mobile devices are frequently misplaced or lost, it's easy to see why mobile email security is a concern to the operators of the Criminal Justice Secure eMail (CJSM) system. Mobile email connectivity uses a separate channel, thus it has to be managed in a different way to standard email controls.

Compliance, Security and Productivity

Now that, practitioners, firms can connect to the CJSM via the firm's email system it becomes even more important for compliance reasons that a CJSM email does not either get delivered or accidentally forwarded within the firm to a colleague's mobile device. janusGATE Mobile can filter out the prevent messages from the CJSM system being delivered to a mobile device, while still alerting the recipient that they have an email that needs their attention.

By simply controlling the content that is sent to the phone, you can attain a balance between productivity and compliance and without special applications being loaded onto mobile devices.

Software originally designed to control sensitive Government communications can be applied by law firms to offer practitioners better notification without compromising security or compliance.

Focus on sensitive email

janusGATE Mobile filters email traffic before it reaches the mobile device and, if sensitive, alerts the user with a simple message to access the full information from their corporate desktop. janusGATE Mobile's flexible rules set can be varied to suit your situation, or role in the firm, such as by:

- Identifying privileged information by email subject
- Restricting content based on email domain (from real.person@csjm.net)
- Blocking all attachments yet letting emails pass
- Stopping emails but letting calendar or contact information pass
- Stopping any Personally Identifiable Information (PII)
- Redacting specific types of information.

Prevention / notification scenarios

1. Email from CJSM delivered to Outlook (desktop computer), notification sent to mobile.
2. Email originally from CJSM forwarded internally prevented from being delivered to new recipient's mobile (still notified).
3. Email from CJSM forwarded externally then use janusSEAL for Outlook, to warn or prevent, janusGATE Exchange to block, or existing SMTP email gateway

Supported Devices
Any that use ActiveSync

BENEFITS

Responsiveness

Immediately receiving notifications can increase your awareness and responsiveness to matters.

Efficiency

Reduce clerical workload as CJSM email notifications are automatically created thus removing the need for manual checks.

Choice

Use the devices you want and change devices whenever new ones are released that suit your taste. Work where and how you wish, knowing your sensitive emails are controlled.

Adaptability

Add new devices, customise rules per device or by role, connect external partners, or take on temporary or contract employees, and give them secure mobile email access quickly. Scale-up without high cost, unnecessary complexity or delay.

Flexibility

Start with simple filtering rules to suit your situation and change them as you need. janusGATE Mobile also works with any email classification system.

Peace of mind

Reduce your risk by replacing sensitive information before it's delivered to mobile devices. Enforce your policies for email to mobile devices and enhance your compliance.

Operating Environment

janusGATE Mobile operates with Microsoft Exchange Server 2007, 2010 and 2013. ActiveSync e-mail clients are present on the following smartphone operating systems:

- Apple iOS (iPhone, iPad)
- Google Android
- Windows Phone/Mobile
- BlackBerry
